Siena 500 Series Engineered Wood Care and Maintenance

Siena 500 Series Engineered Wood has been factory-coated with high performance UV finishes.

Preventative Maintenance:

- Use felt pad protectors under furniture to prevent scratches

- Position mats near outside doors, the kitchen sink, and dishwashers to minimize water damage and dirt

- Keep the floor dry and wipe up spills as soon as they occur, and dry surfaces immediately with soft cloth

- Maintain site humidity between 35-35%

- Use area rugs in high traffic areas

- Avoid repeated direct sunlight exposure to the same area

- Plan to sweep and vacuum regularly with a soft brush head to prevent dirt from scratching floor

Basic Care and Cleaning Tips:

- After dusting or vacuuming, use a mild detergent and warm water to pick up loose dirt and debris. Be sure to use only a damp mop or cloth. There should be no visible standing water.

- Always test and floor treatment in a small area first to ensure the expected results

- Do not use cleaning products that contain waxes, bleach, ammonia, polishes, oil soaps, or abrasive materials.

- Most hardwood flooring cleaners that do not contain materials listed above, including Bona, are acceptable for use.
